

RIMAN

INTERCELLULAR DERMATOLOGY

Where Science Meets Nature

ICD by RIMAN — Influencer Brand Kit

Product Education & Certifications

THE INCELLDERM STORY

ASK Labs, the #1 research lab in Korea spent years researching 'Tigergrass' also known as Centella Asiatica. Tigers would instinctively roll around in this plant to heal their wounds faster.

Scientists from ASK Labs eventually developed their own strain and patented species of plant called Giant BYoungpool.

ICD (Incellderm) stands for Intercellular Dermatology. Patented skincare that works at the cellular level using patented microfluidization and liposome delivery technology that drives active ingredients to the deepest layer of skin and heals at the cellular level.
